Keep your hearing in check *The importance of periodic hearing evaluations*

Aging by itself can cause additional hearing loss, and at rates that vary from one person to the next. A hearing solution that worked for you, say, last year—or even six months ago—may not be delivering results as expected today. An adjustment is to be expected, much like how one’s prescription for corrective lens is made stronger as time passes and the eyes weaken.

The answer is simple: treat your ears much like how you treat your eyes or teeth, and get periodic checkups at least once a year. This will enable your audiologist to stay on top of any hearing

changes you’ve experienced, as well as ensure your current devices are working like new. An unchecked device may no longer be providing you with proper speech recognition or successfully

handling background noise. The good news is hearing instrument technology is constantly improving, and your solution options today may be an even better fit for your needs.

Studies have shown that hearing well can assert a positive influence on nearly every aspect of one’s life, so don’t wait too long. Now could be the right time to trade up for a newer device. Schedule your no-cost hearing and device checkup today. A quick and easy hearing screening is all it takes to guide you on the path to better hearing.

Dear Patients,

Our ability to communicate is key to a successful life and to our happiness. It has been estimated that approximately 35 million children and adults in the United States experience hearing loss. Hearing loss which goes untreated can create fatigue, embarrassment, withdrawal/isolation as well as stress. Hearing loss which goes unmanaged may have a negative impact on education, employment and overall well-being. The loss of hearing can blatantly affect the quality of life. Not only does hearing loss affect the individual but radiates into our relationships with family members,

friends, and colleagues. You may have the hearing loss but your family has the hearing problem.

Only 5% to 10% of adult hearing problems are medically treatable. Today’s hearing technology provides many features and benefits to assist those experiencing a loss of hearing. At Anderson Audiology we have the experience, expertise, and technology to properly evaluate and treat hearing loss. We are dedicated to improving the quality of life for our patients through better hearing solutions in those noisy situations, in group activities and in those conditions when voices may seem too soft or

unclear. Our commitment is 100% patient satisfaction in having your needs, desires and expectations met.

Dr. David

Patient Corner

How has your life changed since receiving a hearing system? We would love to hear from you! Send us your success story and we may publish it in a future newsletter.

Please send your information to katie@andersonaudiology.com.

THANK YOU

to our loyal patients! Look on back for special offers.
